

TMX GLOBAL ANALYTICS™

Order Book Visualizer

Product Description

The TMX Order Book Visualizer is a web-based historical data product powered by TMX Global Analytics™ that allows viewers to examine the full depth of the order book across all TSX and TSXV-listed symbols at millisecond granularity by venue or by the consolidated quote. This tool also provides insights on active buy or active sell volume during various time periods to help traders, quantitative strategy developers and compliance professionals to easily visualize intraday market activity at a level of granularity that was previously available to only the most elite market data setups.

Features

- Convenient filters allow analysis across full depth of book, 2200+ equity securities
- View active buy and sell trade volumes throughout the day to understand market nuances, others may overlook
- Replay function displays on how the order book evolves throughout the day, with pause and fast forward capabilities

Benefits

Easily embed this innovative charting mechanism or the data behind it to your proprietary system functionality through our API.

TMX Global Analytics™

Through our cloud-based tick data analysis platform, we curate high quality equity, ETF, FX, Futures and Options data sets in a readily usable environment designed for highly performant queries and analysis at scale. No expensive hardware or slow queries that take days to run to get the insights you need - TMX Global Analytics™ solves the pains of merging and cleansing multiple, disparate data sets and building internal business cases to acquire hardware and infrastructure needed to get answers you need.
